

BREAST CANCER'S NOT ALWAYS A LUMP

NEW LUMP OR THICKENING

A lump or bump is not always a sign of cancer, but show your doctor to rule it out. Lumps can appear in the breast, armpit area or around the collarbone. Sometimes it could be a thickening in the breast tissue, which feels different to the rest of your breast.

CHANGE IN BREAST SHAPE OR SIZE

Any changes in the size or shape of your breast that are unusual for you need to be checked out too.

BREAST PAIN

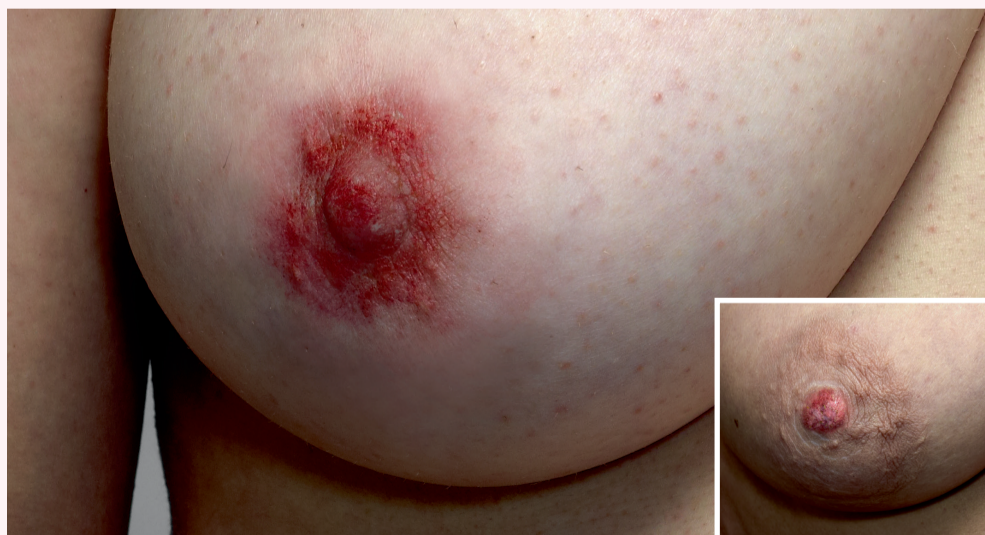

If you have unusual breast pain which won't go away, see your doctor.

NIPPLE DISCHARGE

Discharge from the nipple may be bloodstained thin or watery.

A CRUSTY NIPPLE

A crusty nipple - crustiness on or around the nipple or areola complex. Sometimes it's like a red rash or flaky, scaly skin. It may also feel itchy or burning.

AN INVERTED NIPPLE

A newly retracted or turned in nipple.

DIMPLES, PUCKERING OR DENTS

Dimples, puckering or dents can appear anywhere, even on the underside of the breasts.

SKIN LIKE ORANGE PEEL

A change in colour, reddening or inflammation. The breast is swollen and the skin may look like orange peel because the pores stand out in the inflamed area.
